* If the only reason for testing the hypothesis in equation 2 with H_0 is that $\alpha = 0$ in the hypothesis, then the test is $F(1, 100) = 0.1463$. Since $F_{0.05}(1, 100) = 3.94$, the hypothesis is not rejected. If, on the other hand, $\alpha = 0.05$ in the hypothesis, then the test is $F(1, 100) = 0.0471$. Since $F_{0.05}(1, 100) = 3.94$, the hypothesis is rejected.

The highest number of requests for the (relative independence) of the highest court in the world is the
